The cover graph illustrates the demographic changes the labor force is experiencing. Youth employment peaked in 1983 and the prime working age group (25-54) will continue to grow through 1995.

What does this shift in the age groups mean to labor force characteristics? The work force is becoming more experienced which could result in improved productivity. The percentage of female population in the labor force continues to increase as the career and income needs prevail over the homemaker role. Training needs will become greater for the experienced work force as job skills required are changing rapidly in an economy that has some industries declining and new industries emerging.

GLOSSARY OF TERMS

1. Civilian Labor Force - the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
2. Employed - those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
3. Unemployed - the number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
4. Unemployment Rate - the number of unemployed expressed as a percent of the civilian labor force.
5. Residence Data - a count of people by where people live.
6. Establishment Data - a count of jobs by where people work.
7. Seasonally Adjusted Labor Force Series - to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed using the X-11 ARIMA method of seasonal adjustment. This is the same method used by the Bureau of Labor Statistics to seasonally adjust the national labor force series.
8. Real Spendable Average Weekly Earnings of Private Nonagricultural Production Workers - represents the earnings of a hypothetical individual after deductions for State Income, Federal Income and Social Security taxes, and adjustment for change in purchasing power since 1967. This individual is assumed to be sole support for a family of four, earn the average weekly gross earnings of production workers in Montana's private nonagricultural industries, and take standard deductions on State and Federal income taxes. Taxes were computed using standard tax tables, and purchasing power was adjusted by deflating Spendable Earnings based on the national Consumer Price Index.
9. SMSA - Metropolitan Statistical Area - as determined by the Office of Management and Budget. The SMSA must have a central city with a population of 50,000 or more.
10. LMA - Labor Market Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.
11. SDA - The Job Training Partnership Act (JTPA) was established to replace CETA in job search, placement, relocation, and especially training assistance. Each state designs local plans for JTPA programs through a Private Industry Council (PIC). Each PIC jurisdiction is known as Service Delivery Area (SDA). The two SDA's for Montana are known as Rural CEP (Beaverhead, Broadwater, Deer Lodge, Granite, Jefferson, Lewis & Clark, Madison, Meagher, Powell, and Silver Bow counties) and Balance of State (the other 46 counties).
12. BENCHMARKING - It is a continuous process of establishing a new set of data which affects the series of estimates through revisions. Once a new benchmark is established, the adjustments to estimates between the new benchmark and the preceding one are carried forward progressively to the current month by use of sample trends. The benchmark is established less frequently (usually once a year) based on sample or secondary data. In case of employment data, the benchmark is used to establish the level of employment, while the sample is primarily used to measure the month - to - month changes in the level.
13. LBPM - Represents Labor Market Projection Model developed by the Lawrence Berkley Laboratory. The basic method of LBPM is a demographic cohort aging model that relies upon 1980 census data, along with labor force trends from Montana's Research & Analysis Bureau.
14. CES-790 Program - current employment statistics survey produces monthly estimates of a wide variety of employment and earnings information for the nation and each state.

DESCRIPTION AND RANKING OF MONTANA

Montana can be described as a large, sparsely populated state that depends on natural resources for most of its economic prosperity. Further economic characteristics can be defined by splitting the state into eastern and western halves. The open grass plains of eastern Montana support extensive grain fields and provides grazing for large herds of beef cattle. In recent years, the exploration and development of fossil fuels has been an increasing activity and now a significant employment area. In the mountainous western part of the state the major economic activities are metal mining, lumber and wood product manufacturing, and tourism.

Basic industries determine the direction of a state or local economy. Industries considered basic in Montana include manufacturing, agriculture, mining, tourist related, railroad, heavy construction (highways/electric power plants), and federal government.

Another influence on Montana's economic development is the small business. In the private, nonfarm wage and salary jobs, one-fourth of jobs are in firms with less than 10 employees and two-thirds of workers are with firms that have less than 50 employees.

MONTANA'S RANKING AMONG 50 STATES

<u>Item</u>	<u>Rank</u>	<u>Montana</u>	<u>U.S.</u>

Nationwide

The national economy has enjoyed a very brisk recovery following the severe 1981-1982 recession which officially ended in November 1982. The strength of the recovery, especially in 1984, exceeded virtually everyone's expectations. We achieved rapid growth without a new burst of inflation. Gross National Product-the total value of goods and services produced-increased 6.8 percent in real terms. That is a big increase. Consumer prices rose only about 4 percent. The unemployment rate had one of the largest yearly declines recorded-from 9.6 percent to 7.5 percent. It would be accurate to call 1984 a year of strong employment gains-about 3 million more people had jobs by the end of the year than were employed a year earlier.

Much of the growth occurred during the first half of the year and the slowdown has given 1985 a moderate growth outlook. The unemployment rate has held firm (in the low 7's) as the economy appears to be taking assessment of its position and moving cautiously ahead. The continued weakness of the balance of trade is still a big concern.

PERCENT GROWTH				EMPLOYMENT GROWTH BY OCCUPATIONAL GROUP			
1984 Quarter	Civilian employment	Real GNP	Industrial production	Occupation	Employment		Percent change
					1983 IV	1984 IV	
I	1.1	10.1	2.8	Managerial and professional specialty	24,071	25,305	5.1
II	1.2	7.1	2.1	Technical, sales, and administrative support	31,843	32,849	3.2
III	0.3	1.6	1.5	Service occupations	14,115	14,239	0.9
IV	0.6	2.8	-0.2	Precision production, craft, and repair	12,814	13,268	3.5
				Operators, fabricators, and laborers	16,618	17,132	3.1
				Farming, forestry, and fishing	3,365	3,393	0.8

MONTANA

In 1984 Montana's economy continued the improvement that started in late 1983, but some weakness still persists in our economy. The annual average unemployment rate declined in 1984 - the first downward movement in five years for both unemployed persons and the unemployment rate. The number of wage and salary jobs increased at a faster pace in 1984 than in 1983, but jobs in basic industries continue to decline. One of the weakest improvements occurred in the average weekly earnings of production workers. Usually the annual average weekly earnings increase is measured in dollars, but the past year's improvement can be measured in nickels and dimes.

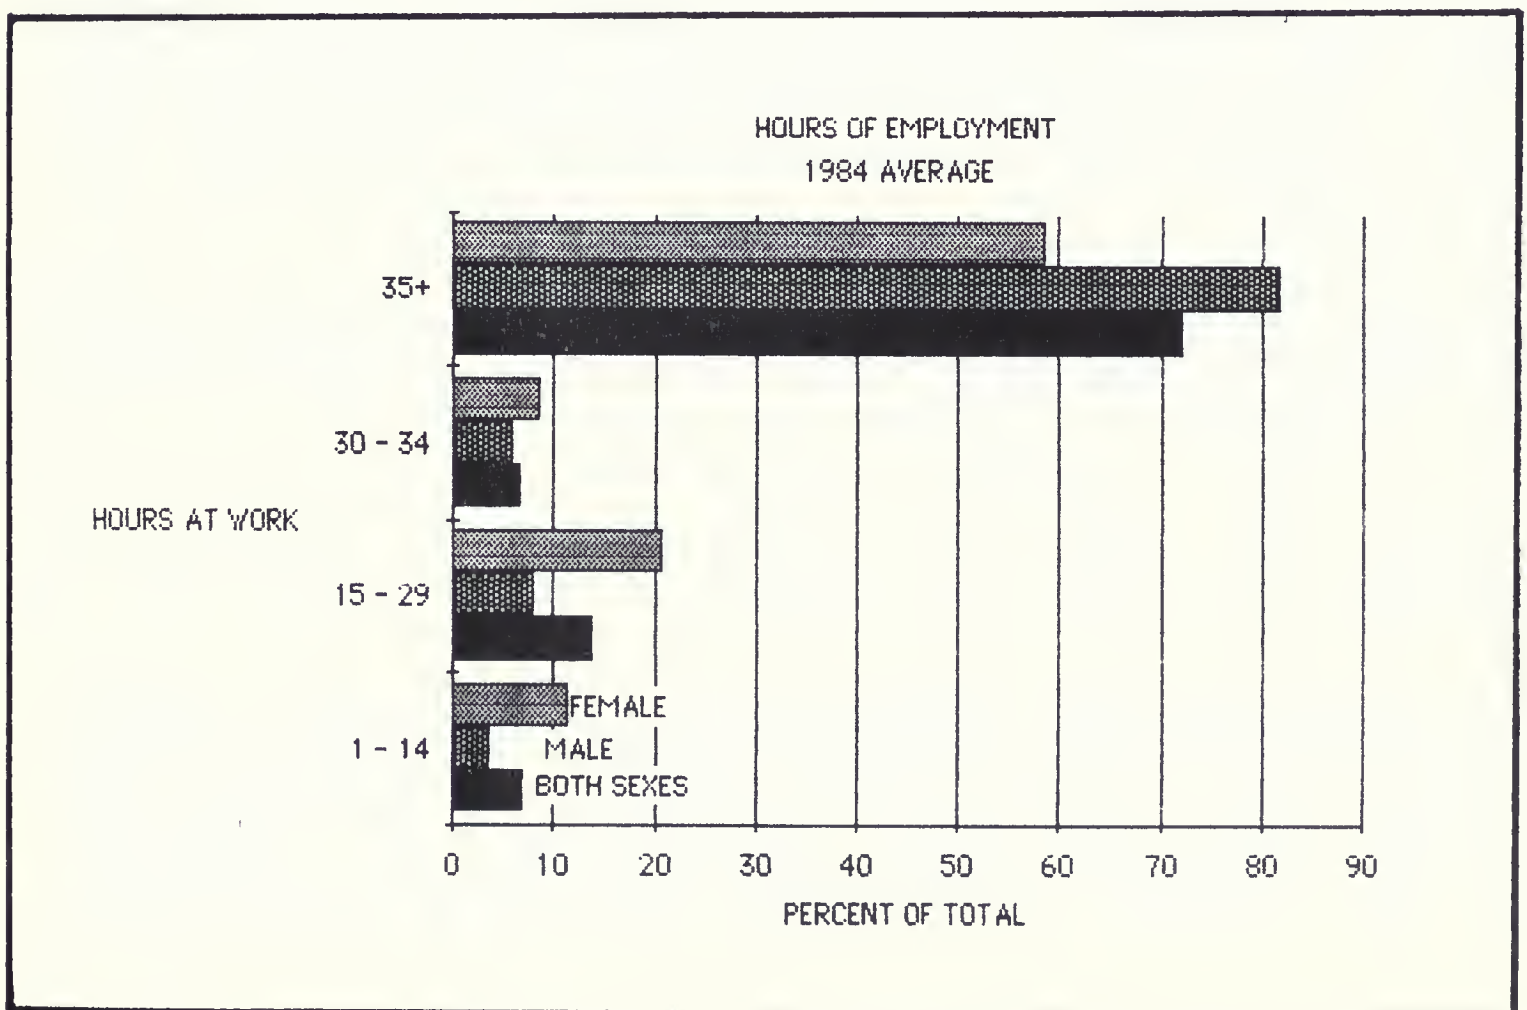

In reviewing the nonagricultural wage and salary jobs, 1984 realized a 4900 job gain over 1983's figures. This is the largest job increase since 1978. Leading these gains were the service and trade industries. Finance, insurance and real estate improved some and industries remaining near the same level of employment included manufacturing, mining, and government. Construction was the only major industry to experience a decline from 1983 to 1984. This was due to completions in the power plant construction at Colstrip.

Business expansion, as measured by new start-ups with the unemployment insurance program, slowed in 1984. The last four years percent increase over the previous year's new businesses are as follows: 1981 (28%), 1982 (9%), 1983 (10%), and 1984 (4%). One possible conclusion might be that the expansion is now quieter and steadier, and modest gains are part of the expected slower growth pattern of the

economy. Service and trade industries comprised 61 percent of the total new business start ups in 1984.

Another quick indicator of the state's economy is new car sales. In 1984 there were nearly 7 percent fewer new cars sold than in 1983. However, truck sales were up 10 percent.

Unemployment insurance statistics indicate that Montana's work force in 1984 was more stable and less migrant than in previous years. Of those people filing for unemployment insurance compensation, the number of workers that were employed and laid off in Montana and then moved to another state declined for the first time since 1977. Also, those workers that were laid off from their job in another state and then moved to Montana declined by 34% between 1983 and 1984.

Agriculture

Most of the industry information gathered and reviewed by this agency pertains to non-agriculture wage and salary employment. Since agriculture is an important basic industry in Montana, a review is certainly needed. A recent agriculture survey is available from the Montana Department of Agriculture. Also an excellent review of the agriculture industry is included in the Economic Conditions in Montana 1984 publication produced by the Montana Department of Commerce.

Agriculture's economic condition is best represented by revenue generated, and the low grain and livestock price along with high production costs have resulted in low net farm income in all but one year since 1979. The current financial crisis is of such magnitude and has existed long enough that it will take several years to see any improvements based on market forces alone. A Department of Agriculture farm survey identifies many problems of farmers. Young farmers are of particular concern as they have greater debt problems.

Agriculture services has experienced growth in the past few years, mostly in small enterprises such as feed lots, veterinary services and landscaping services. From 1979 to 1984 agriculture services have increased by 70 percent in number of new businesses but only about a 30 percent increase in employment.

The most noticeable industry to be influenced downward by the crisis in agriculture is implement dealers (Standard Industrial Classification Code 5083). The decline in farm machinery sales and services resulted in nearly 500 job terminations between 1979 and 1984. Many small grain terminals have closed or become storage facilities because of the massive shift to large grain terminals that handle unit-train grain hauling.

In summary, agriculture has been and will be affected by high interest rates, low market values for crops, high production costs, imports, and catastrophic weather.

Manufacturing

The lumber and woods industry continues to dominate the manufacturing activity in Montana. Considering the influx of lumber products from Canada and the high interest rates for commercial and home construction, just maintaining 1984's employment and production near the recovery level that started late in 1983 was a reasonable accomplishment. Keeping the mills in operation had some sacrifices. Several mills required a two dollar per hour wage cuts to stay in

business and other mills used reduced work week to adjust for product demand.

The state timber supply outlook is good, but the competition is keen to supply the lumber products being demanded. Surplus capacity still exists in the active mills even though closure of some smaller and older mills have occurred throughout the Pacific Northwest. Canada's market share has expanded from 10 percent in the late 1960's to more than 30 percent now. Demographic changes are causing and will cause a decline in first time home buyers. Fewer homes will be built in the 1980's as compared to the 1970's. We do not expect any major improvements in lumber and wood products.

In 1984 500 jobs were lost in the food products industry. This was due to a loss in sugar production and meat packing plant closures. Only one-eighth the normal sugar beet crop was produced because of a contract dispute with growers in the Billings area. The sugar plant now has new ownership and a 1985 contract has been agreed to by all sugar beet growers. Two meat packing plants in Billings experienced operation difficulties resulting in one closure in late 1984 and another in February 1985. Over a period of four years these two meat packing plants have contributed 1100 jobs that are now gone.

An industry to watch for possible shutdown is the aluminum manufacturing plant near Columbia Falls. Although employment and production increased between '83 and '84, the parent plant plans to sell off or close this plant. In fact, all of the Pacific Northwest aluminum plants are having difficulty in their operations because of lower aluminum prices and substantial increases in electrical cost. Electricity consumption makes up about one-third of total expenses.

Most of the other manufacturing employment levels improved in 1984. For example, an Indian tribal-sponsored enterprise has become the largest non-government employer in northeast Montana. Many of their products, such as medical transport chest, are supported by government procurement contracts. Electronic equipment manufacturing (often classified as the high-tech industry) has improved in the state but has not kept up with the nation's growth. Perhaps Montana is fortunate to have limited high tech employment because the industry is experiencing a slump in product demand. In Idaho, the electronics industry laid off 2,500 workers between June 1984 and May 1985. However, an industrial park for high-tech firms is planned for developed near Montana State University.

Mining

Metal mining employment was fairly steady in 1984 and this is a good indicator considering the current low market price for most metals. Early in 1985, layoffs did occur in gold mines in reaction to low prices. Several new gold mines have been proposed throughout the western counties and are being studied by the Montana Department of State Lands. A large open-pit gold mine located near Helena was to begin construction in 1985 but environmental studies need refining before state officials will give any final approval.

Coal production did increase from 1983 to 1984, but this was due to an in-state power plant coming into operation. No other new major coal contracts were developed in 1984. In fact, the fate of an existing coal contract between a state mining firm and a Texas utility company will be decided in a court decision. The utility company feels they can buy coal elsewhere at a lower price. They want to break a twenty-six year contract they signed in 1974.

Tax incentives on new coal contracts developed within the next two and one-half years are now available. However, expansion of coal business is dim as the demand for coal has been slowed by modest growth for electricity.

During 1984, oil and gas exploration increased in volume and expanded into untested areas of the state. In the past year, 745 oil wells were drilled in Montana - about 50 percent more than the year before and just 6 percent below the annual averages experienced over the past decade. The western counties drilled fifteen test wells and seismic work continues on Overthrust Belt exploration. Results are not yet known, because exploration information is being withheld as long as legally possible. Montana and Idaho are the only states left that have not realized a substantial oil and gas discovery in the Overthrust Belt that runs between Mexico and into Canada. Exploration work is expanding in the eastern counties outside the Williston Basin.

Construction

Construction employment, except for heavy construction, has been on a general decline since 1978. Heavy construction does not fit this pattern because of electric power plant construction that started in 1981. Now that the power plant project is nearly completed, large construction layoffs occurred in 1984. Highway construction has shifted from re-construction to preventive maintenance. Recent increases in the gasoline tax will aid in keeping the maintenance program active.

Housing construction has the population shift to contend with for several years, resulting in a lower demand for new homes. The baby boomers are growing out of the prime age for forming households. However, "If the economy continues to grow strongly and interest rates continue to come down, you can ignore the demographics". In the Billings metro area, single-family building permits are down by nearly 60 percent in the first five months of 1985 when compared to one year ago. This sharp decline may not be reflective of the whole state, but it does indicate how volatile the housing market is.

Transportation, Communications and Utilities

Transportation employment experienced a large employment increase that was due to an adjustment for employers that had not been reporting properly. The state's major railroad continues to abandon infrequently used branch lines - some of these branch lines may be kept in operation by local area users.

Telephone communication employment started declining in 1982 and continued through 1984. The reduction appears to have slowed down now. This reduction in force can be attributed to technological and operational changes. The allowance of other firms to compete in the telephone communication business certainly has caused modifications and adjustments. Some employment has shifted into the trade sector as sales and services of telephone systems increase. Also, Montana is experiencing a slower growth in telephone lines.

One more coal fired power plant became fully operational in 1984. Another one had its work schedule delayed by pushing the completion date back nine months. Reasons for the delay include cash flow problems, incomplete transmission lines and more electricity surpluses. Future electrical consumption estimates have been adjusted downward to reflect the slower economic growth and conservation affects.

Wholesale and Retail Trade

In 1984, trade had the largest employment increase of the major industry groups. Wholesale trade employment had an improvement after a two year decline. Billings is increasing its importance as a distribution center and nearly one-third of the statewide wholesale employment is in Yellowstone County.

Leading the retail trade growth for some time now is eating and drinking establishments. The results of a survival rate study on eating and drinking businesses indicate a high turnover/failure percentage on both established and new ventures in restaurants and bars. If an enterprise had been established before 1977, it has a 50 percent survival rate that it will still be operated by the same owner five years later. For a new bar or eating place, chances of the ownership surviving five years is only one out of four (25%).

Finance, Insurance, and Real Estate (FIRE)

During 1984, employment increased slightly in FIRE. Real estate increased their employment above the previous high employment levels of the late 1970's. In 1985, some Montana cities have an all time high number of pre-owned homes listed with real estate agencies.

The poor agriculture economy is creating problems in the banking industries. Three agriculture credit institutions were forced to close their operation and many other banks have increased their reserves preparing for defaults on agriculture loans. Deregulation of interest rates that banks can pay on consumer deposits has caused greater competition for depositors and borrowers. Banks are trying to convince Congress to allow the industry into more financial services. Banking employment did experience a small reduction during 1984 - consolidation and automation were the main causes. Savings and Loan Associations and credit agencies did increase employment.

Service

The service sector as a whole continued employment expansion in 1984. However, rapid growth in the 1984 health industry came to a screeching halt. In the previous five years, health employment averaged a yearly growth of four percent. This past year's growth was not even one percent. We may see a further decline in health services employment. One of the state's largest hospitals in Billings laid off 86 workers. The layoffs are the first in the hospital's history and many are permanent. Hospital officials attribute the reduction in force to the hospital's declining number of patients. Lower patient services at hospitals result from new outpatient surgery services and changes in the federal health assistance programs.

Continuing a gradual shrinkage is the motion picture industry. An example of consumer shift in desires occurred in Helena--a drive-in theater was demolished and replaced by a fast food restaurant. The retail trade has picked up on the movie demand with video rentals.

Hotel and other lodging facilities employment improved as the employment levels approached the same level as the peak year of 1981. More national chain hotels and motels are being built throughout Montana. There are some cities that are concerned about an over-built lodging situation, especially in Missoula and Billings.

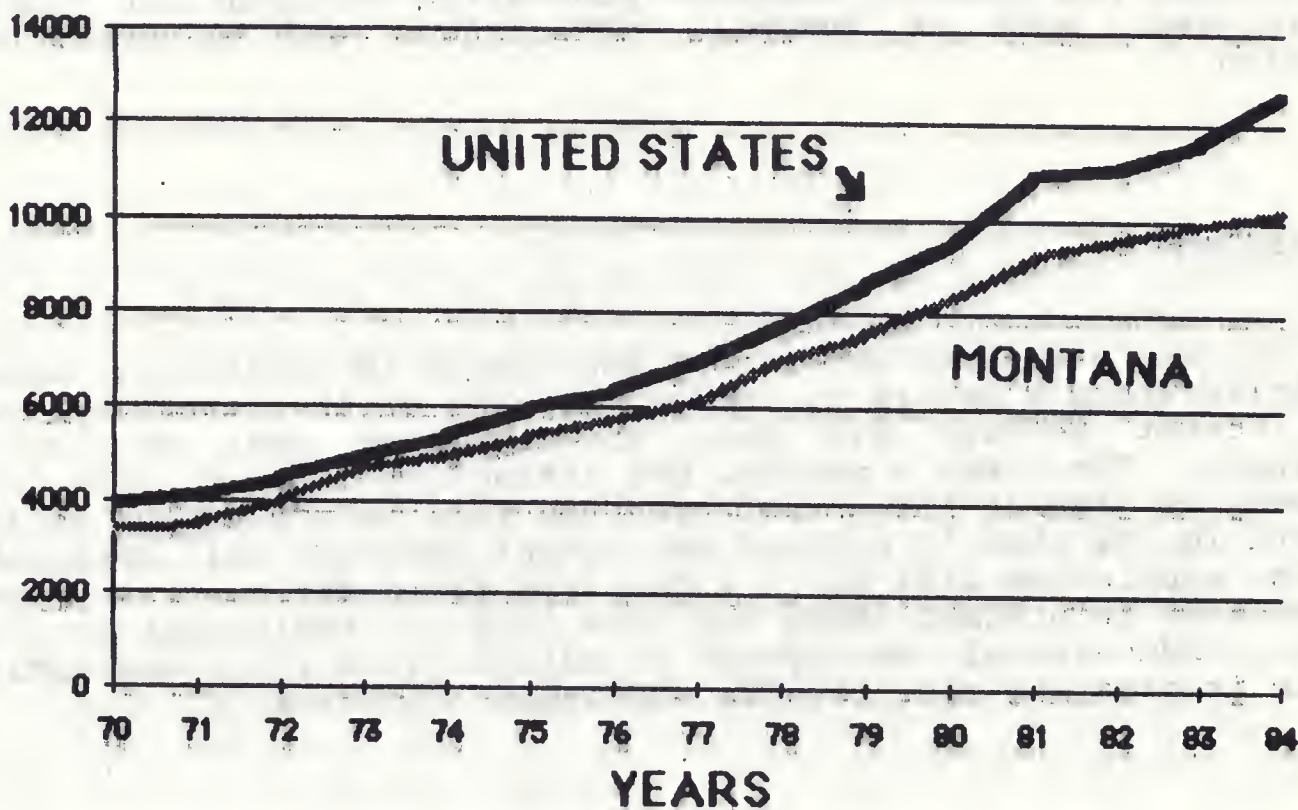

Business services expanded nine percent during the year. Most noticeable was computer and data processing services and miscellaneous businesses, such as business consultants and equipment rental and leasing.

Government

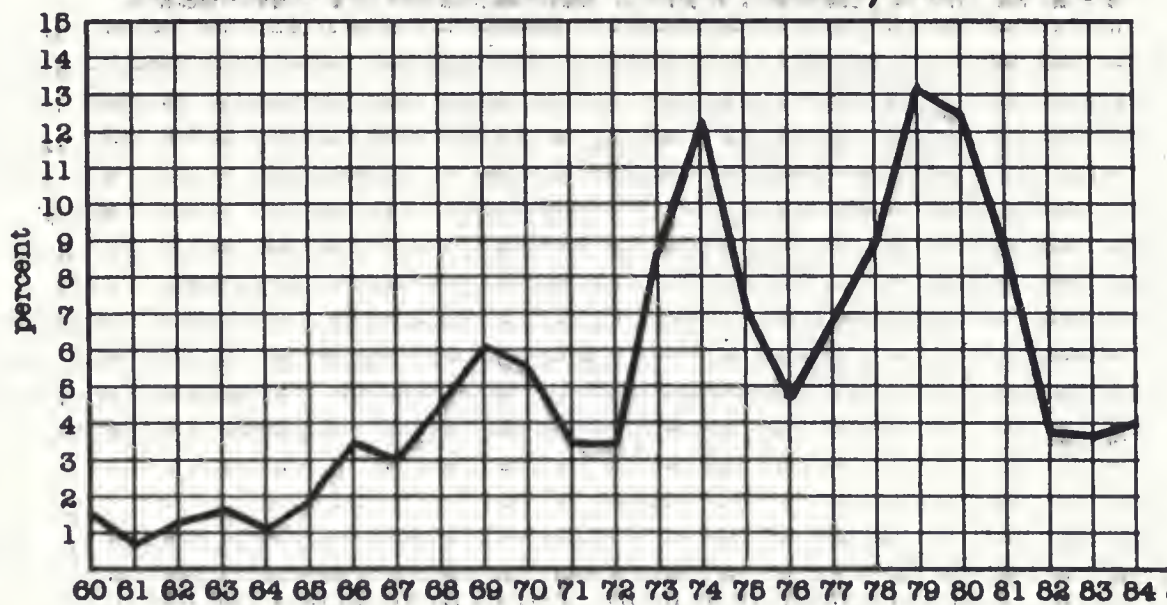

Montana's federal government employment is apparently following the Administration's desire to reduce the size of the government workforce. The Forest Service has been affected the most by the reduction decision. The state's payroll was influenced upward from the large number of forest fires that occurred late in the summer of 1984. The growth in the state's college employment probably will diminish as the youth population will be in a downward trend for several years. Local government maintained about the same level of employment from 1983 to 1984. Educational employment is adjusting to the demographic changes which is creating some layoffs and school closures.

DOLLARS

Increase in Consumer Price Index, Dec. to Dec.

LABOR FORCE CHARACTERISTICS

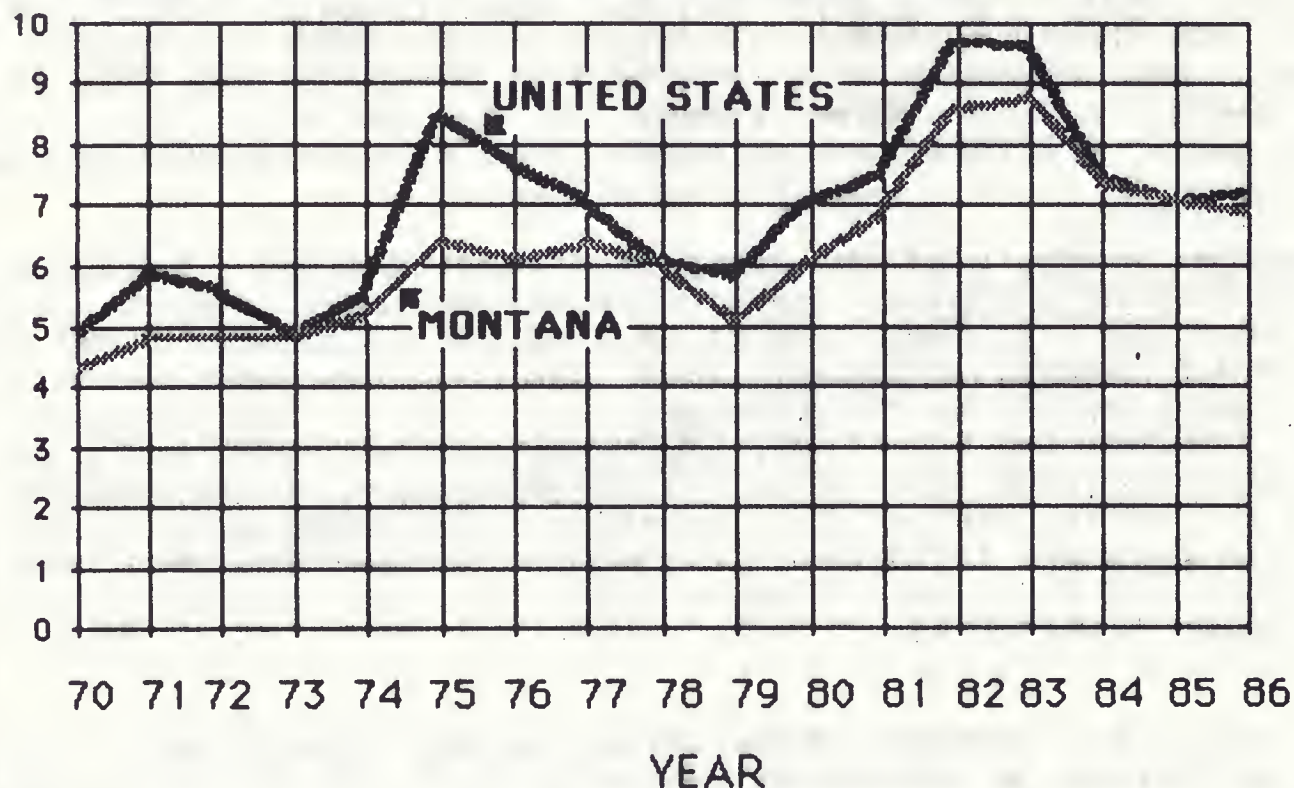

During 1985 and 1986, a positive outlook has been projected for Montana's civilian labor force. In the next two years, the number of unemployed persons is expected to remain constant through 1986 at about 29,000. Employment is forecast to increase during 1985 and 1986, but the growth will be less than what was experienced in 1984. The unemployment rate should continue the downward trend that started in 1984, but again not as sharp of a decline that occurred from 1983 to 1984. In 1986 the unemployment rate is expected to be about 6.9 percent, which is nearly the same rate as before this past recession started.

A further analysis of the unemployed count noticed a downward shift in the portion of unemployed persons receiving unemployment insurance (U.I.) benefits. In 1981, almost half of the total unemployed managed to obtain U.I. benefits, but by 1984 the portion has decreased to nearly one-third of the total unemployed. Some of the possible causes include: (1) stricter U.I. laws, (2) automation able to reduce the number of non-qualified applicants (3) the recession caused workers to be eligible for fewer weeks of U.I. benefits, (5) structural unemployed are on an increase (structural unemployed are persons that were permanently laid off such as those workers in the copper mining and manufacturing industries).

In 1984, the current population survey unemployment rate for females returned to a level that is higher than the male's unemployment rate, after a two year condition where the female rate was lower than the rate for males. The lower unemployment rate for females during 1982 and 1983 was largely caused by a recession that affected male workers and male-dominated industries to a larger degree. One factor that causes female workers to experience a higher unemployment rate than males is women's frequent movement into and out of the work force for child rearing purposes. Many characteristics of the female worker are reviewed in the Bureau's publication Montana Women in the 80's.

In recent years total employment (self-employed, unpaid family workers, agricultural workers, and wage and salary workers) has managed to increase at a reasonable pace, but the over-all nonagricultural wage and salary employment level has been sluggish. From 1981 to 1984 total employment expanded by nearly 20,000 jobs. Nonagricultural wage and salary employment experienced a sharp decline in 1982 and has rebounded since then, but only to the employment level equal to 1981's level. Much of the recovery by the nonagricultural wage and salary employment has been in secondary jobs, as the recovery is passing by the vital basic jobs. Secondary jobs are in those industries that tend to turn over existing money in a community rather than pulling in new money from outside the area that would be spent in the community. Secondary jobs tend to be in lower paying industries such as retail trade and services.

1990 Projections by Industry and Occupation

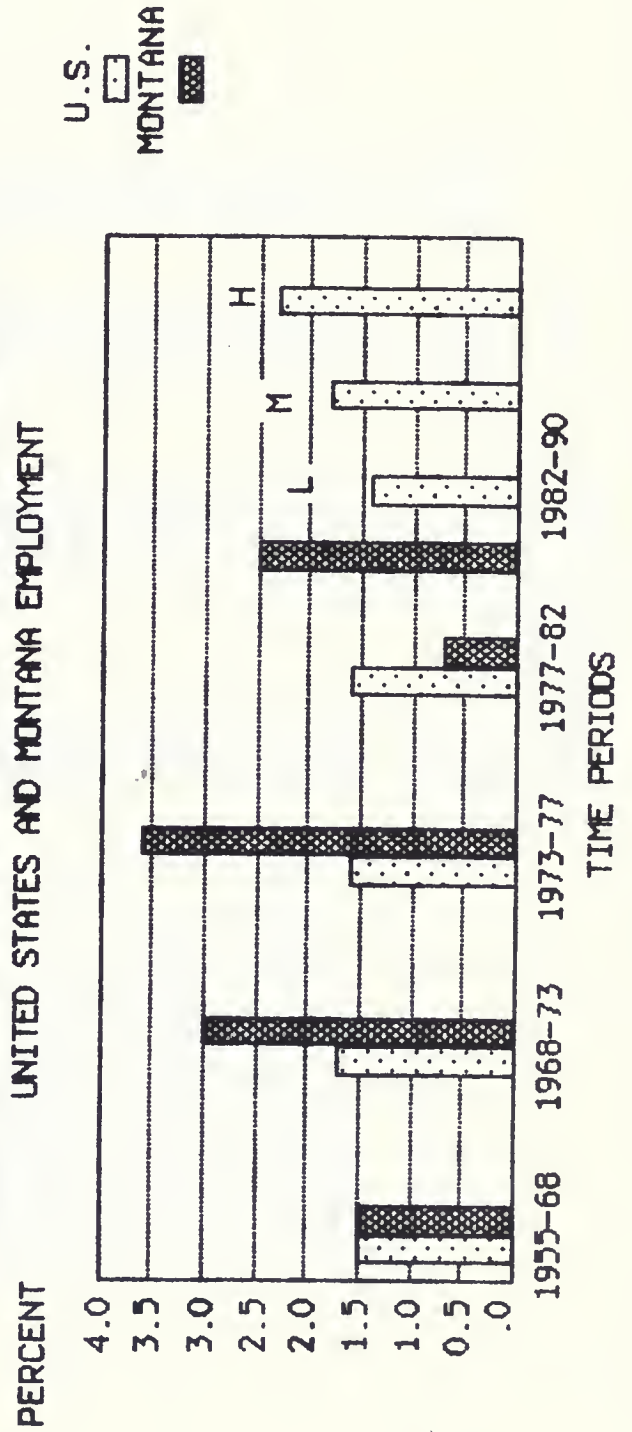

A revised 1990 outlook for industries and occupations in Montana is being compiled. The updated 1990 Projection publication and a 1990 summary article will be available in the fall of 1985. The updated publication will be the third 1990 outlook produced. Montana's 1990 employment level was reduced approximately 20,000 from the first publication to the second publication. Changes between the second and third edition should not be as drastic, but a slightly slower growth rate is anticipated.

MONTANA'S JOB OUTLOOK FOR OCCUPATIONS 1982-1990
-HIGHLIGHTS-

Montana's job market should experience an employment growth totaling 54,398 over the eight year period, which amounts to an annual average growth rate of 2.4%. Montana's annual growth rate is greater than the latest national projected growth rate. Considering the impact of the past recession on Montana's economy, the growth rate can be looked at as being optimistic.

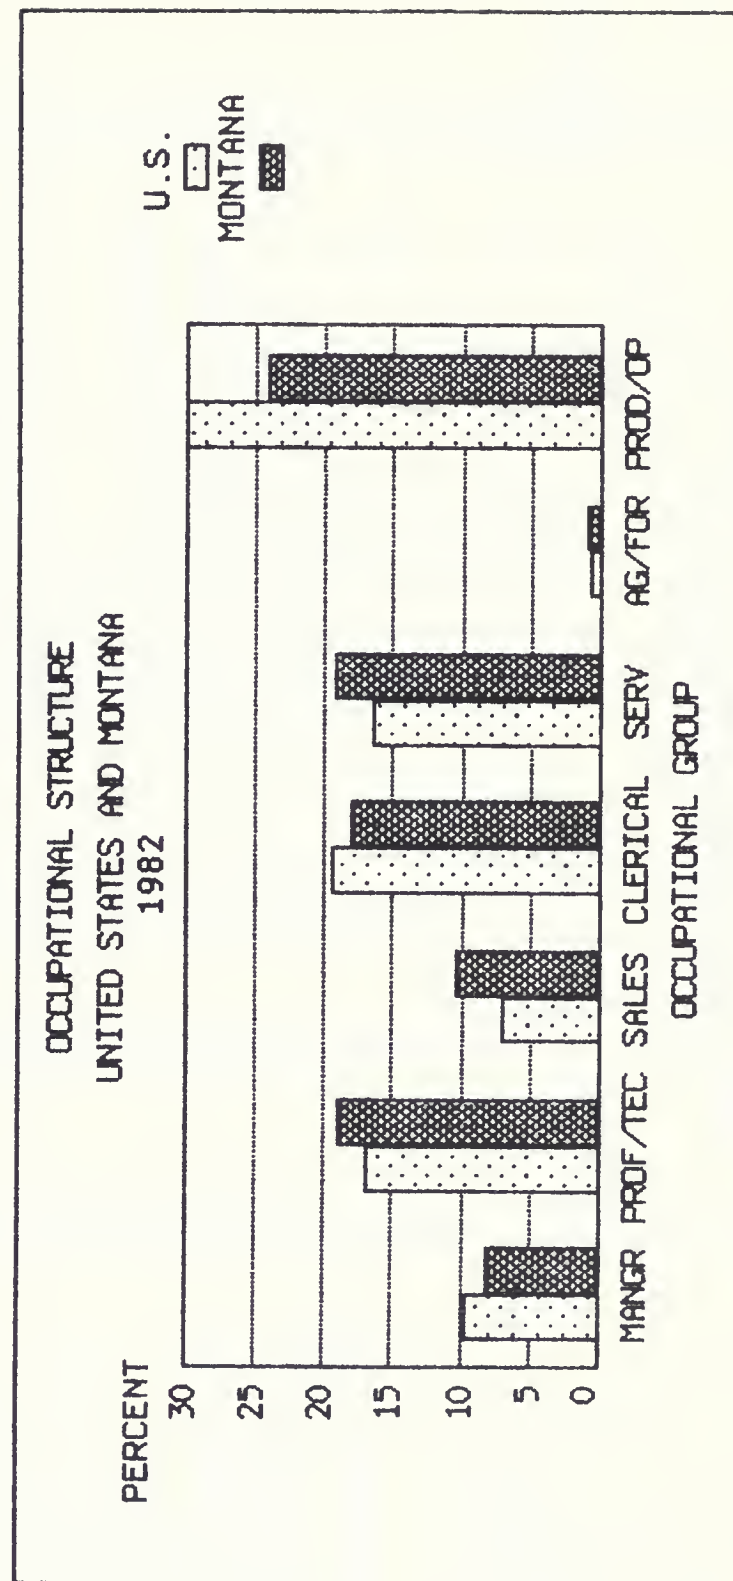

Jobs in Montana are concentrated in relatively few occupations. Listed are 320 detailed occupations with the largest 44 occupations controlling 50 percent of the total jobs. Also, when considering the annual average openings, the top 40 occupations will produce nearly 51 percent of the job openings. The training or education needed for most of the larger employment occupations is not extensive - many jobs are low skilled positions but some, such as nursing, do require several years of college.

In reviewing the total annual average job openings series, 60 percent of the job openings are due to labor force separations and the other 40 percent are due to growth. The overall economic conditions in Montana should be considered when applying the average openings, especially the openings due to growth. For example 1983 was a bad year, 1984 appears to be a good growth year and early indications for 1985 call for a slow growth year. Thus, reasonable prosperous economic activity over a period of years would perceive the job openings close to the annual average job openings.

In the fastest growing occupations listing those occupations considered white collar and service jobs make up 75 percent of the 62 occupations listed and the other 25 percent are blue collar type jobs. The occupational structure of Montana is continuing its gradual shift from blue collar jobs toward white collar and service occupations, but this shift in Montana is not as prevalent as the national change. Blue collar workers in Montana are influenced by the abstraction and production of natural resources, while nationwide there is a blue collar concentration in manufacturing.

BUREAU OF CENSUS SPECIAL ECONOMIC DISADVANTAGE REPORT

1985 Poverty Income Guidelines

Family	Poverty Guidelines		
	Size of 48 Contiguous States & DC	Alaska	Hawaii
1	\$ 5,250	\$ 6,560	\$ 6,040
2	7,050	8,810	8,110
3	8,850	11,060	10,180
4	10,650	13,310	12,250
5	12,450	15,560	14,320
6	14,250	17,810	16,390
7	16,050	20,060	18,460
8	17,850	22,310	20,530

For family units of more than eight members add the following amount for each additional family member: \$1,800 for 48 contiguous states and the District of Columbia; \$2,250 for Alaska; and \$2,020 for Hawaii.

ECONOMICALLY DISADVANTAGED CATAGORIES
1980 CENSUS DATA

DEFINITIONS

TOTAL POP

TOTAL POPULATION FROM THE 1980 CENSUS OF POPULATION

16 YR+, \$14K TFI

LOW INCOME ADULTS IN LOW INCOME FAMILIES--PERSONS AGE 16 AND OVER WITH A TOTAL FAMILY INCOME(TFI) LESS THAN \$14,000 (\$14K)--WHICH ARE FOR USE BY THE FOUR STATES (KENTUCKY, MINNESOTA, MONTANA, AND WISCONSIN) WITH RURAL CEPS.

ED

ECONOMICALLY DISADVANTAGED IS THE HIGHER OF THE TOTAL NUMBER OF PERSONS WITH A TOTAL FAMILY INCOME AT OR BELOW THE OMB POVERTY LEVEL OR 70% OF THE LOWER LIVING STANDARD INCOME LEVEL.

ED, 16 TO 21

ECONOMICALLY DISADVANTAGED PERSONS AGES 16 THROUGH 21
